

Question.

What is refreshment time for different types of CAEN power supplies?

Answer from Claudio Raffo, CAEN, General Manager of Computing Division.

SY127

Monitor values refreshment time is 200 msec.

SY403

We have not results available, but I suppose that the time spent in the conversions is quite small (under 1 sec, I mean).

SY527

The refreshment time consists of two parts: a fixed time of 1.2 sec and a variable time which is a function of the number of the channels and of the type of the boards.

We (CAEN) have made the following measurements:

- 10 boards A932 (the 24 distributed channels + 1 active channel) = 250 channels => $1.2 + 4.6 = 5.8$ sec.
- 10 boards A734 (a 16 channels board) = 160 channels => $1.2 + 2.9 = 4.1$ sec.

SY1527

The time is 0.5 sec, independently of the number and the type of the boards inside the box.
